

# DATCOM® soft

## DATCOM Communication System

---

### Preface

DCS is the main communication unit which is connected to the LANserver of DATCOM GPRSgateway and connected to a MS SqlServer database.

DCS saves all received vehicle data from GPRSgateway to SqlServer database.

DCS sends all user orders from SqlServer database to vehicle via GPRSgateway.

DCS manages customer data, user data, driver data, vehicle data and other logistic data.

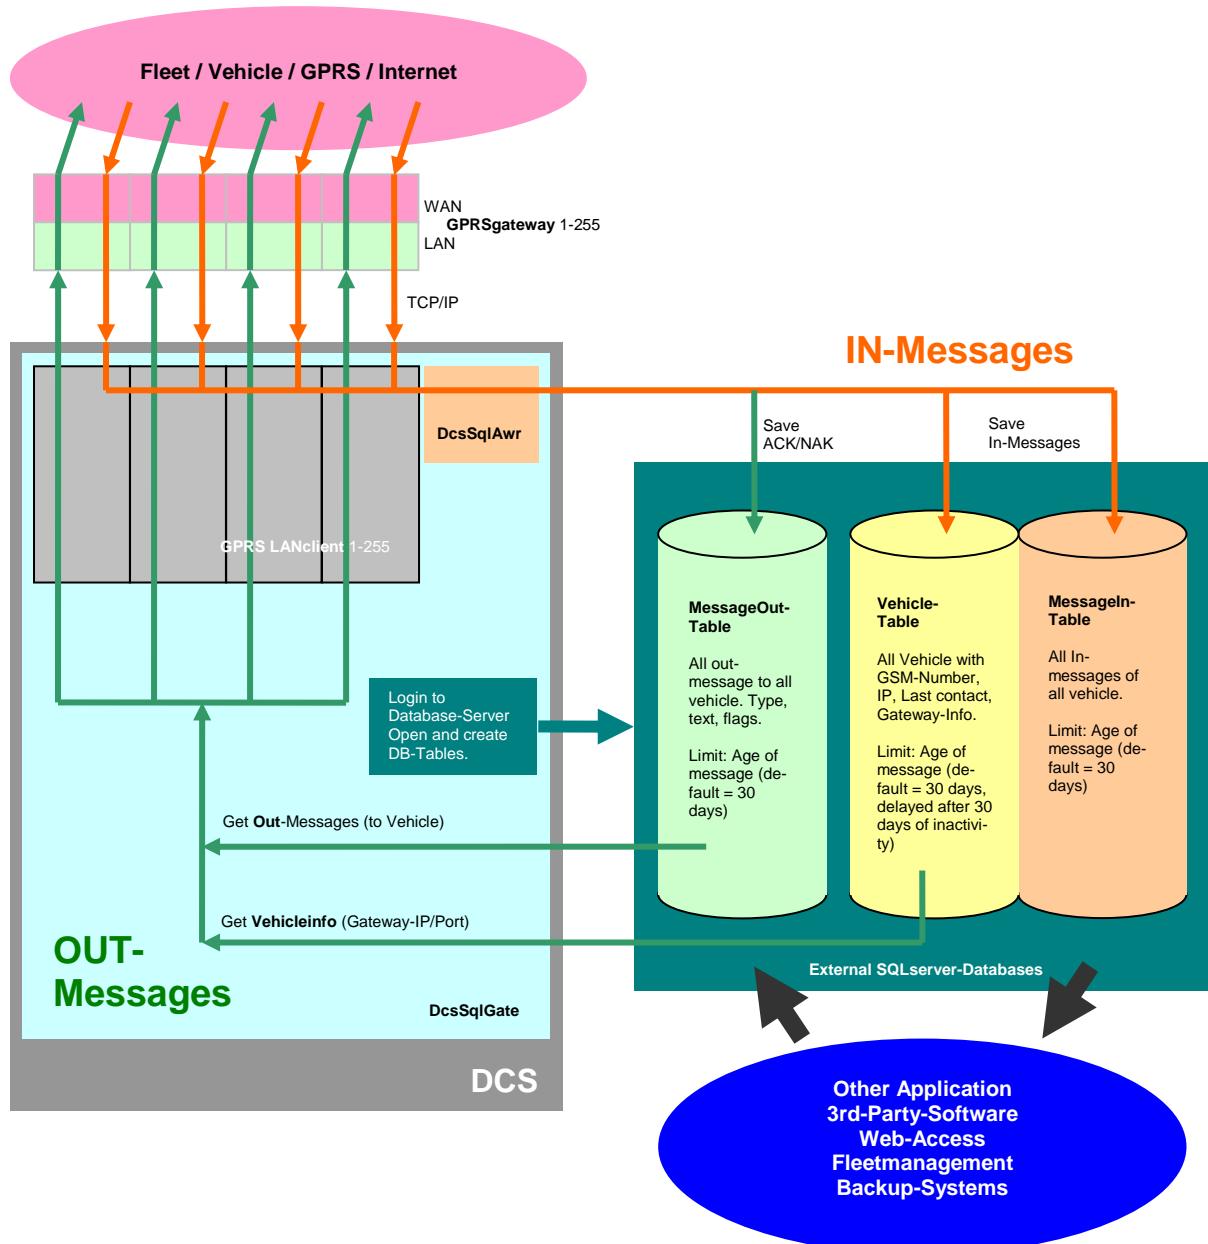

The **DATCOM Communication System** consists of the following modules:

- **DATCOM DCS** (**DATCOM Communication Server**) with MS SqlServer database
- **DATCOM GPRSgateway** for communication with vehicles via GPRS
- **DATCOM SMSserver** to receive and send SMS with vehicle (7E-Format only)
- **DATCOM Mapfleet**, optional fleet management portal (asp.net), which includes Webservice for connection of 3<sup>rd</sup> party web solutions to the database
- Different internal DCS modules to get jobs done like Alert-, Sms-, Object-Solutions
- Other 3<sup>rd</sup> party fleet management solutions

# DATCOM® soft

## DATCOM Communication System

### DCS

DCS is the main communication unit which is connected to the LANserver of DATCOM GPRSgateway and connected to a MS SqlServer database.

DCS saves all received vehicle data from GPRSgateway to SqlServer database.

DCS sends all user orders from SqlServer database to vehicle via GPRSgateway.

DCS manages customer data, user data, driver data, vehicle data and other logistic data.

### System requirements

2 GB RAM

Network connection

Windows xp, vista, 7, Server 2003, 2008 (32/64 Bit)

MS .Net Framework 3.5

MS SqlServer 2005 / 2008

### Installation

Please start the setup program on the CD and follow the installation steps.

The program will finally be installed as service. You have to be Administrator to do this.

The setting program (DCS Properties) can be linked as symbol on the desktop and can be started from program group **DATCOM soft**.

With next system start the service "DCS" will be started automatically. Other program parts and functions will also be activated.

To get it configured and tested you have to start DCS Properties.

# DATCOM® soft

## DATCOM Communication System

### DCS Properties

#### Process Start

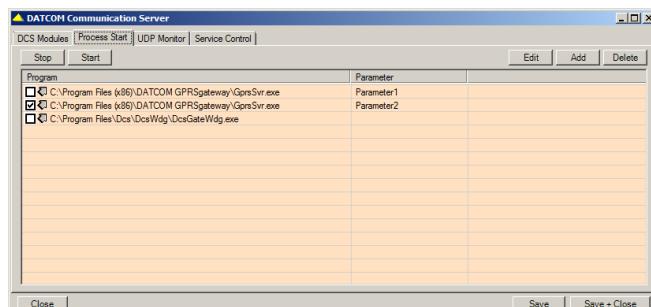

Herewith other programs or modules will be started while service DCS is started.

It might be useful to start the server DATCOM TCPserver or DATCOM GPRSgateway with the service. But it is also possible to start any other desired programs with the service.

Usually, if there are already DATCOM programs installed, they will be automatically being selectable here.

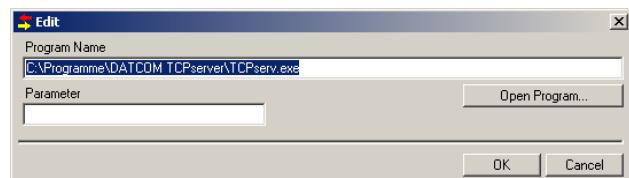

Only activated lines (check marked) will be started.

If programs need parameter to be started correctly edit this in column *Parameter*.

#### Add

This adds programs as new line to the list. Choose a program on your system. Additionally, it is possible to hand over a parameter to the program while starting it.

#### Edit

This button edits the marked line for selecting another program or another parameter.

#### Delete

The button deletes the selected line.

Only saved information will be started by DCS. Therefore it is always necessary to press one of the saving buttons for accepting the settings.

- *Save only* = only saving
- *Save + Close* = saving and closing the setting window
- *Start* = the saved and active entries are started for testing it.
- *Stop* = the saved and active entries are stopped for testing it.

#### Start

By pressing the **start** button the active programs will be started with user interface (normal program start).

#### Stop

Herewith the active programs will be stopped as process.

# DATCOM® soft

## DATCOM Communication System

All check marked programs will start without user interface (service start, invisible).

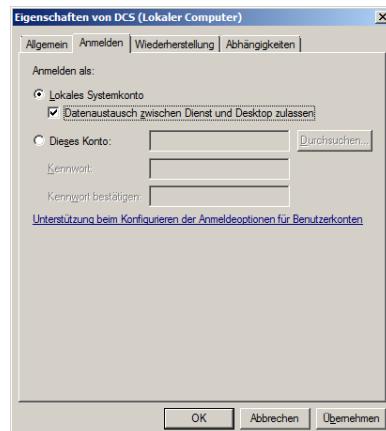

All programs which are started by DCS must not have any user entries. Windows and dialogs which are expecting a user reaction are invisible, and would lead to an apparent deadlock of the appropriate program. Alert windows must close independently after a certain period. User applications must be deactivated (DATCOM fleet).

There is no problem to start also **DATCOM GPRSGateway** or **DATCOM SMSserver** automatically as service.

To start multiple GPRSGateways as service and to increase the memory allocation of each task it is advisable to allow DCS service to exchange data with the desktop.

### DATCOM fleet :

DATCOM fleet as user program must be configured not to require any user entries. The administration must be switched off, and the automatic connection to the appropriate servers by starting the program must be activated. The database should be operated in master mode, the settings "as server..." should also be activated so that PTV maps are set invisible.

After a certain period alert windows should be closed automatically (see defaults for alerts).

A program which is automatically started by DATCOM fleet will also be re-activated by DATCOM fleet. For example, if you want the GPRSGateway to start already with DATCOM fleet's own program start, it can be deleted in the list "Additional Startups" by DCS to avoid double activation (once by DCS and twice by DATCOM fleet).

It is always recommendable to start all programs only by DCS. Therewith DCS can always terminate the started programs, which is not possible for DATCOM fleet.

### Service Control

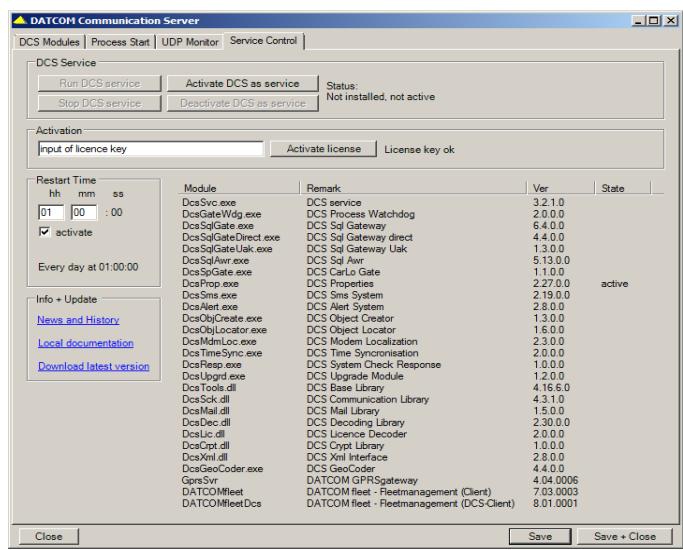

Herewith the service DCS can be started and stopped manually. It is also possible to activate and deactivate the service.

**Run DCS service** starts the service and all program parts and program startups belonging to it.

**Stop DCS service** stops the service and all program parts and program startups belonging to it.

Always when restarting the system the service DCS will also be started, which corresponds to the function "Start DCS".

Via **Activate DCS as service** and **Deactivate DCS as service** the service can be removed from services or inserted into services on the local machine.

### Activate License key

To activate all functions put in your license key which is shipped with program and press button **Activate license**.

# DATCOM® soft

# DATCOM Communication System

## **Restart Time**

To restart DCS and all modules at a predefined time of day put in hour and minute and activate the check mark.

## **Info + Updates**

To get information about updates, documentation and support.

News and history

Get the latest information about updates from DATCOM Web.

## Local documentation

To show the PDF-File from local installation folder. The documentation file was installed by setup of program DCS.

## **Download latest version**

This downloads the latest version of DCS. Download the Zip-File of DCS-Setup from DATCOM Web, save it in a local folder, extract the Zip-File and run setup.exe to get the latest version installed.

## UDP monitor and protocols

The service DCS runs without user interface. Therefore it might be useful to log or watch all activities to an output-box if necessary.

The logfiles are hold in ***DCS program directory*** and subfolder ***Logs***. Here the ***month subfolder*** holds all generated ***daily files*** with the format YYYYMMTT.log, e.g. „**DcsSvc\_20120926.log**“. It will attempt to log all activities, occurrences and errors.

If *DCS Properties* is active all protocol entries can be seen in **UDP Monitor**.

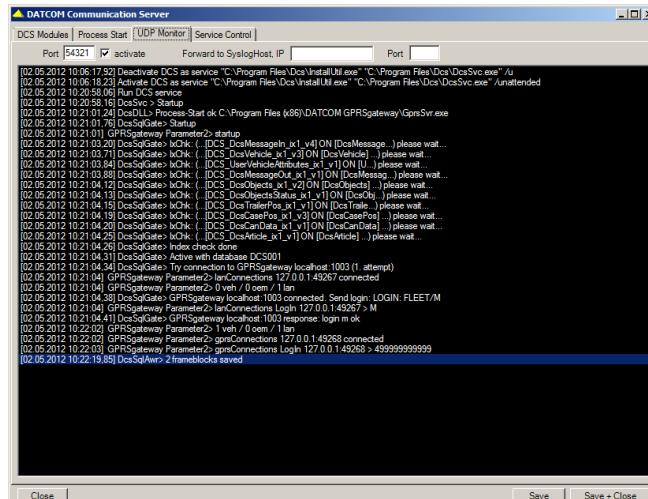

Enter a free local UDP-port where the UDP monitor is meant to receive the log information. Activate the function and save these settings with "Save"-Button.

## All log information

1. are written into the protocol file
  2. and sent to UDP monitor if DCS Properties is active.

The UDP monitor displays the last 500 log informations, but only if properties window is active. Otherwise all actions are written into the log-files only.

## Forward to Syslog Host

25.04.2016

**DATCOM protelmatik GmbH**  
Sprudelallee 19

info@protelematik.de  
www.protelematik.de

# DATCOM® soft

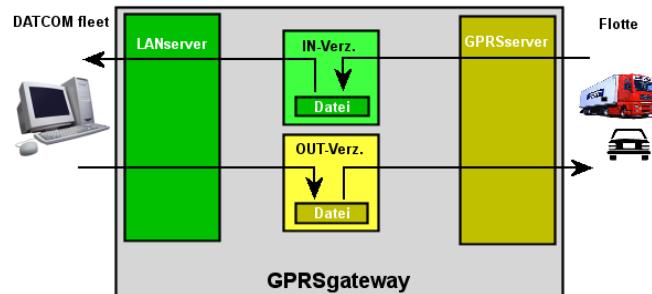

## DATCOM Communication System

To make the Log-engine forwarding all log informations to a second receiver put in **IP address** and **port** of the server to which all log informations should be sent to additionally. The UDP protocol is used for this function.

### DCS Modules

The DCS SQL-Gateway maintains the connection to the DATCOM GPRSgateways and saves all data of the communicating vehicles into a database. It is possible to send orders to the vehicle via the sending data table.

Therefore the LANserver of the DATCOM GPRSgateway must be available via TCP/IP-protocol.

### GPRSgateway

The required DATCOM GPRSgateways are accessible with their IP-address and port.

Therefore the GPRSgateway must be active and have to be reachable via TCP/IP. The connection is cyclically checked and will be re-established in case of loss of connection (60 seconds checking).

**Add** applies a new line where you can enter IP, port, login sequence and a remark.

**Edit** is accordingly editing a marked line.

**Delete** deletes the marked line.

DATCOM Communication Server				
DCS Modules   Process Start   UDP Monitor   Service Control				
GPRSgateway   SMSService   SQLService   SMTPService   External Interface				
IP LANserver	Port LANserver	Login Sequence	Remark	
<input checked="" type="checkbox"/> localhost	1003	LOGIN: FLEET/M	only for testing	
<input checked="" type="checkbox"/> fleetman.de	22135	LOGIN: FLEET/M	Service 155	

Close      Save      Save + Close

Enter the **IP address** and the **port** of the LANserver. Here also is needed a login sequence which is usually "**LOGIN: FLEET/M**".

Only activated lines (check marked) will be used. Press always the button **Save** to save the settings. The program only activates settings from saved configuration file.

### Login Sequence M / S

Remote IP:	fleetman.de	no domain-names, strictly ip-adresses only!
Remote Port:	22135	1 to 65535
Login Sequence:	LOGIN: FLEET/M	LOGIN: FLEET/M or FLEET/S
Remark:	Service 155	

OK      Cancel

**Master:** GPRSgateway holds back any data until a Master has logged in. If any Master is logged in all data will be shipped to all connected client, no matter if Master or Slave. If DCS connects to GPRSgateway as Master it will receive all data in real time.

**LOGIN: FLEET/M**      (case sensitive)

**Slave:** If DCS is connected to GPRSgateway as Slave all data are hold back and buffered in GPRSgateway until a Master will connect. With this moment DCS will receive all data from GPRSgateway in real time.

**LOGIN: FLEET/S**      (case sensitive)

# DATCOM® soft

## DATCOM Communication System

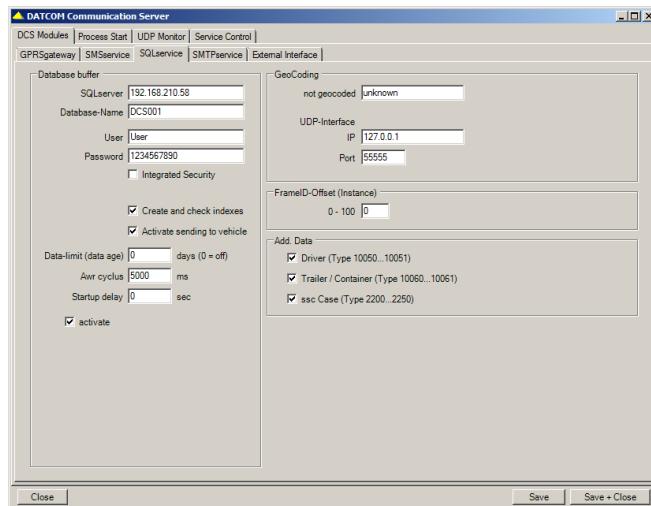

### SQLservice:

To save all received data of the vehicles it requires following settings to the SqlServer:

#### SQLserver

Put in the name, IP or resource of the required SqlServer. To use a different Port of SqlServer add a comma and the port, like:

**192.168.210.58,11280**

#### Database-Name

Put in the name of the database where the vehicle data is meant to be saved.

There is no need to have the database already exist in the SqlServer. If database doesn't exist DCS will create it. Therefore user has to be allowed to create database, tables and fields in SqlServer.

All required data tables and data fields are automatically put into the defined database by DCS. If "Create and check indexes" is activated all indexes will be installed or checked also.

#### User

Put in the user name for this database. Make sure that user is allowed to create or change database, tables, indexes and fields, save, change and delete records.

#### Password

Put in the valid password for the user.

#### Integrated Security

This uses the MS-Windows security login with PC name and registered actual user. Hereby the user and the password are not logged in at the SqlServer, but only the user and the appropriate PC. In case of starting the system as service this can cause problems.

Try to bypass this setting.

#### Create and check indexes

To speed up the common Sql Queries DCS is able to insert its default index tables to database. There is no need to do this, because the index tables can also be inserted by hand or on its own needs.

#### Activate sending to vehicle

DCS looks up for data to be sent to vehicle in *DcsOutMessage* table. To activate or deactivate the cyclic data search use this check mark.

**DATCOM protelmatik GmbH**

# DATCOM® soft

## DATCOM Communication System

---

### Data-Limit (data age)

Older data can be deleted automatically. Therefore put in the data age as days. After reaching this age older data are deleted from the SqlServer database. If SqlServer itself will manage the job you can deactivate the DCS function by putting in **0** (zero).

It is always the better way to make MS SqlServer deleting its own old data by a service job. Look at the example of deleting old data at the end of this documentation.

### AWR cyclus

After the receiving of the vehicle data an internal process is initiated which decodes this data and saves it into SqlServer database. This process runs every n milliseconds. Change value to have it speeded up or delayed. Best values are between 5.000 and 20.000 ms.

### Startup delay

If system will be rebooted due to necessary maintenance, the start of DCS can be delayed to make sure that SqlServer has started well before DCS will connect to its Database.

### Activate

Activates and deactivates the saving into the SqlServer database in general.

### GeoCoding:

#### Not geocoded

All new location data are saved with location information "unknown" by DCS in database as default.

If DCS GeoCoder is installed, configured well and active all new location data with location information "unknown" will be reverse geocoded. The text "unknown" will be replaced by Geocoder's geoinformation in the case that DCS GeoCoder found location information in its PTV database.

Put in another text to change the default text "unknown" and press Save-button.

### UDP-Interface

DCS GeoCoder has integrated an interface to answer via UPD with its location information. Put in *IP-Adress* and *Port* on which DCS GeoCoder should answer any geocoding UDP requests.

### Frame ID Offset

(*In progress and in change*)

### Add. Data:

To save **driver** activities to database (Types 10.050, 10.051) activate check mark.

# DATCOM® soft

## DATCOM Communication System

To save **trailer** and container activities to database (Types 10.060, 10.061) activate check mark.

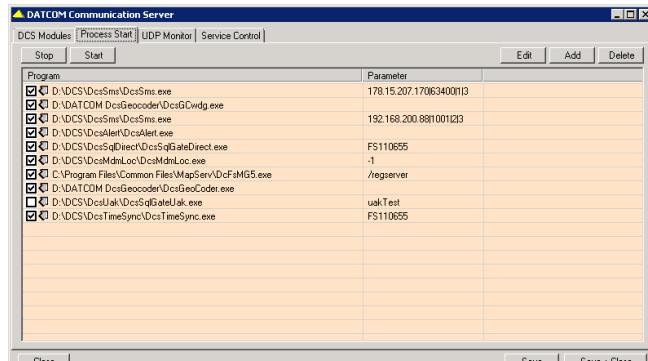

To save **security case** activities to database (Types 2.200 to 2.250) activate check mark.

### Startup of additional functions with Process Start

Manages all programs which should be started when service DCS starts to get additional functions and analyses. This may be own modules or included DCS modules.

#### Alert analysis

**Function 1:** Alerts Type 10012 are forwarded from the DCS database to an appropriate receiver group depending on the requirements. The forwarding will be done via e-mail.

**Function 2:** Temperature data is checked for maximum or minimum deviation of given limit values. In case of exceeding (or falling below these values) alerts are forwarded from the DCS database to the appropriate receiver group depending on the requirements. This forwarding will be done via e-mail.

**Program:** C:\Programs\DCS\DCSAlert\DCSAlert.exe

**Parameters:** none

**Options:** can be started only once

#### SMS analysis (receiving)

**Function:** The program establishes a TCP connection to a SMSserver and decodes only standard SMS Type "7E". All other types of SMS messages are discarded. These 7E-SMS of the vehicles are saved into the database.

**Program:** C:\Programs\DCS\DCSSms\DCSSms.exe

**Parameters:** 231.122.141.158|1001|4|3

**Separators:** | = Pipe (Alt 124)

**Parameter 1:** IP address SMSserver (e.g. 192.168.1.34)

**Parameter 2:** Port SMSserver (e.g. 1001)

**Parameter 3:** Instance count (e.g. 1-10)

**Parameter 4:** Encryption depth (standard = 3)

**Options:** can be started several times

# DATCOM® soft

## DATCOM Communication System

### Time Sync (synchronizes time of local system)

**Function:** The program connects via TCP/IP to Timeserver `time.nist.gov` every 60 minutes to receive the exact time and to set the locale time.

**Program:** `C:\Programs\DCS\DCSTimeSync\DCSTimeSync.exe`

**Parameter:** `FS110655`

## File Download

### Properties

The function "File Download" is used to transfer files between the DATCOM boxes and the DCS system.

To unlock this feature a separate license is required which is shipped by the manufacturer of DCS.

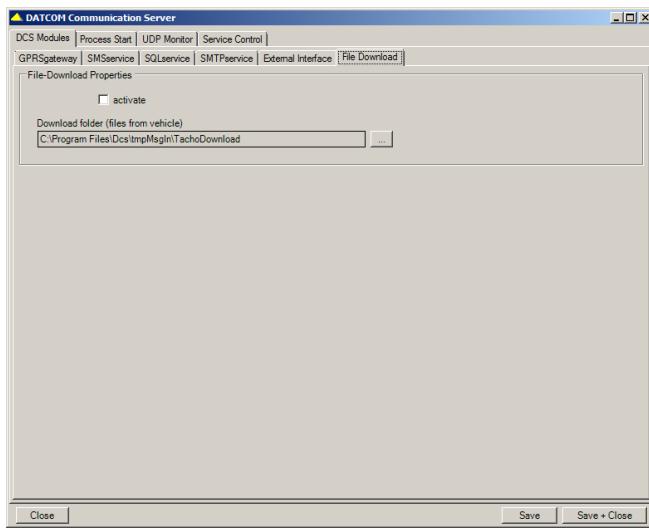

The only possible direction to download files is from DATCOM-Box to DCS.

The message types 0x4000 to 0x4FFF are used for this function. The data of these message types are not stored into database. They are only saved as files in a special folder.

### Download folder (files from vehicle)

Enter the download location for these files and push "activate" to activate the download function. Press then the "Save"-Button to have it activated within the DCS-Service.

All received files will be saved now in this download folder. The files in this folder can be processed by specialized software. No file will be deleted by DCS.

### Database

#### Customers, dispatchers, vehicles and drivers

The **customer** (DcsCustomer) is "owner" of

**Dispatchers** (DcsUser)  
**Vehicles** (DcsVehicle)  
**Drivers** (DcsDriver)

#### Excerpt of Customer data: DcsCustomer

Description, field name	Type	Remarks
CustomerNumber	nvarchar(100)	Clear and unique customer number (CustomerId) of the customer (a customer is owner of User, Vehicle und Driver)
Name	nvarchar(100)	Customer name
Title	nvarchar(100)	Address data of the customer (optional)
Address	nvarchar(100)	
City	nvarchar(100)	
Region	nvarchar(100)	
PostalCode	nvarchar(100)	
Country	nvarchar(100)	
Phone	nvarchar(100)	
Fax	nvarchar(100)	
Mail	nvarchar(100)	
Web	nvarchar(100)	
ActiveFromDate	Datetime	Active from (is checked at User, see there)
ActiveToDate	Datetime	Active to (is checked at User, see there)
InvoiceType	Smallint	Invoice type (optional to accountancy)
InvoiceCyclus	Datetime	Invoice cycle (optional to accountancy)
BillingType	Smallint	Billing type (optional to accountancy)
BillingCyclus	Datetime	Billing cycle (optional to accountancy)

#### Excerpt of User data: DcsUser

Description, field name	Type	Remarks
UserAccessName	nvarchar(100)	Clear and unique name of the user
UserAccessPwd	nvarchar(100)	Respective password to log in the portal (duplicated)
UserAccessLevel	int	Access levels (1 = Basis, 2 = Premium, 3 = Superior)
UserAccessGroup	nvarchar(50)	Group membership (1 group letter e.g. A, see also UserAccessGroups at DcsVehicle table)
UserActiveFromDate	datetime	From when the user is allowed to access
UserActiveToDate	datetime	To when the user is allowed to access
CustomerId	int	Respective customer ID (see table DcsCustomer)
ContactName	nvarchar(100)	User name
ContactTitle	nvarchar(100)	User title
Address	nvarchar(100)	User address
City	nvarchar(100)	User city
PostalCode	nvarchar(100)	User postal code
Country	nvarchar(100)	User country
Phone	nvarchar(100)	User phone number

# DATCOM® soft

## DATCOM Communication System

Fax	nvarchar(100)	User fax number
Mail	nvarchar(100)	User mail address
PageDesign	nvarchar(100)	Respective corporate identity (datcom, posinet etc.)
FormHeight	int	Height of the webpage in pixel (640, 720, 810) depending on the user's monitor

### Excerpt of Group mapping: DcsGroups

Description, field name	Type	Remarks
Identification	nvarchar(100)	<b>Clear and unique description</b> of the user, vehicles, drivers, customers or others
A	nvarchar(100)	Name or description of the group
B	nvarchar(100)	Name or description of the group
C	nvarchar(100)	Name or description of the group
D	nvarchar(100)	Name or description of the group
E	nvarchar(100)	Name or description of the group
F	nvarchar(100)	Name or description of the group
G	nvarchar(100)	Name or description of the group

## DATCOM Communication System

### Excerpt of Vehicle data: DcsVehicle

Description, field name	Type	Remarks
VehicleGSMnumber	nvarchar(255)	Clear identification of the vehicle (e.g. GSM number 49171456789)
GatewayLanIP	varchar(50)	IP address of the LANserver at the GPRSgateway (e.g. "80.17.22.210")
GatewayLanPort	int	Port of the LANserver at the GPRSgateway (e.g. 52654)
GatewayGprsIP	varchar(50)	IP address of the GPRSserver at the GPRSgateway (e.g. "80.17.22.210")
GatewayGprsPort	int	Port of the GPRSserver at the GPRSgateway (e.g. 63486)
VehicleIP	varchar(50)	IP address of the vehicle at the GPRSgateway (e.g. "80.187.13.203")
VehicleName	nvarchar(255)	<i>Vehicle name – optional (e.g. "DCS new (49151654321)")</i>
VehicleLastContact	datetime	Last message, last contact with the vehicle
VehicleLastContactHbFrameId	bigint	FrameID of the last vehicle message (can be read in DcsMessageIn)
VehicleTypeID	int	<i>Type of vehicle (e.g. 1 for Datcom, 2 SafeMate, 3 Mambo2) – optional</i>
DriverID	nvarchar(100)	Driver ID - optional
VehiclePwd	nvarchar(50)	Password for protected vehicles - optional
VehicleGrafic	image	Graphic data for symbolization of the vehicle - optional
VehicleGraficID	int	Graphic data for symbolization of the vehicle - optional
CustomerID	int	<i>Customer ID - optional</i>
MainGroup1	nvarchar(50)	Group membership: basegroup (e.g. "new vehicles")
MainGroup2	nvarchar(50)	Group membership: maingroup (e.g. "unknown")
SubGroup1	nvarchar(50)	Group membership: subgroup 1 (e.g. "GPRS")
SubGroup2	nvarchar(50)	Group membership: subgroup 2 (e.g. "created by DCS")
activeDateFrom	datetime	<i>Activation: Vehicle is active from date/time (is checked)</i>
activeDateTo	datetime	<i>Activation: Vehicle is active to date/time (is checked)</i>
AccessLevel	bigint	Access level: 1 = vehicle set by DCS 100 = vehicle set by webservice
AccessFlag	bigint	<i>Activation: Parameters and additional defaults or feedbacks</i>
maxTransactionLimit	bigint	<i>Activation: Upper limit of actions with vehicle</i>
maxSendLimit	bigint	<i>Activation: Upper limit of sending messages to vehicle</i>
maxReceiveLimit	bigint	<i>Activation: Upper limit of receiving messages from vehicle</i>
UserAccessGroups	nvarchar(100)	<i>Letter code for user mapping: "ABCDEFG" allows access for user with UserAccessGroup A, B, C, D, E, F or G.</i>
iON	int	0 = OFF (MsgType 1003) 1 = ON (MsgType 1002) 2 = not logged in GPRSgateway 3 = logged in GPRSgateway and data received
FwVer	nvarchar(50)	<i>Version of vehicle's firmware</i>
FwUpgrdStatus	nvarchar(50)	<i>Status of last firmware upgrade</i>
FwUpgrdUrl	nvarchar(300)	<i>Url of upgrade files of firmware</i>
FwUpgrdUser	nvarchar(100)	<i>Name of administrator / initiator / user</i>
FwUpgrdDate	datetime	<i>Date Time of last firmware upgrade</i>

### Receiving

#### Excerpt of Receiving data: DcsMessageIn

Description, field name	Type	Remarks
<b>VehicleGSMnumber</b>	nvar-char(255)	Clear identification of the vehicle (e.g. GSM number 49171456789)
<b>DbInDate</b>	datetime	When saved
<b>HbFrameId</b>	bigint	Identification of a frame (ID), if a frame is enclosing several messages, each of them will get the same FrameID and the same FrameSize.
<b>HbFrameSize</b>	int	Number of messages in a frame (each message within a frame is saved as single message and gets the same [HbFrameID] and the same [HbFrameSize] as the whole frame - usually [HbFrameSize] is 2 (= 1 message + 1 GPS position), but can also be bigger, if more than 2 messages were received in a frame (text + GPS + temperature + telemetry + timestamp = 5)).
<b>DbOperator</b>	var-char(255)	Saved by (e.g. "DCS Server 004")
<b>CustomerId</b>	int	Customer ID, the vehicle is assigned to
<b>MsgDate</b>	datetime	When received
<b>MsgHbType</b>	int	Type of message (e.g. 61441 = gps or 1001 = keycode)
<b>MsgHbTypeText</b>	var-char(255)	Decoded information of the message (e.g. GPS)
<b>MsgHbFrameHex</b>	var-char(2048 )	Hexadecimal original frame (key-info hex)
<b>MsgHbFrameStr</b>	var-char(1024 )	Ascii-conversion of the original frame (binary)
<b>LocationDate</b>	datetime	Position: when was the position detected (utc)
<b>LocationLongitude</b>	var-char(50)	Position: Longitude (WGS84), e.g "9,56789"
<b>LocationLatitude</b>	var-char(50)	Position: Latitude (WGS84), e.g "45,12345"
<b>LocationAddressText</b>	nvar-char(255)	Position: geocoded (zip code, city, street) - optional
<b>LocationSats</b>	int	Position: number of involved satellites
<b>LocationSpeed</b>	int	Position: speed in km/h
<b>LocationDirection</b>	int	Position: direction in degrees (0-360)
<b>LocationStatus</b>	int	Position: Status (0x20 = ok, 0x02 = old)
<b>LocationDop</b>	int	Position: variation and quality – optional
<b>LocationHbFrameHex</b>	var-char(512)	Position: Original position information in hexadecimal notation (for self analysis)
<b>sDriverId</b>	var-char(100)	Driver ID (I-Button)
<b>sDriverName</b>	var-char(100)	Driver name (if exists)
<b>isRead</b>	bit	Data was read by client (true or false)
<b>Reader</b>	var-char(100)	Client name, reader
<b>ReadingDate</b>	datetime	Read when (date + time)
<b>ReadingText</b>	var-char(255)	Additional information read (why)
<b>xTAN</b>	bigint	If the message which was received by the vehicle includes a TAN (Type 8001), it will be saved to all message blocks.

### Sending

#### Excerpt of Sending data: DcsMessageOut

Description, field name	Type	Remarks
<b>VehicleGSMnumber</b>	nvarchar(255)	Clear identification of the vehicle (e.g. GSM number 49171456789)
<b>MsgTime</b>	datetime	Order: when recorded, received
<b>MsgTransferMedium</b>	int	Order: Send via medium x (e.g. 1 = GPRS, 100=WebSvc)
<b>MsgTAN</b>	nvarchar(255)	Order: identification of transaction (any text, e.g. order ID)
<b>MsgUrgency</b>	int	Order: urgency of the order (e.g. 1 = unimportant, 65535 = extremely important, 0 = do not send)
<b>MsgHBType</b>	int	Order: Type of message in H-block system (1 – 65.535)
<b>MsgHBFrameStr</b>	varchar(1024)	Order: Ascii text files (without "quotes") e.g.: "Order and sending text" for text orders (text types) "17" as decimal numerical value for control commands (telemetry and others)
<b>UserName</b>	Varchar(100)	Order: user name, dispatcher, sender Therewith the sending orders are assigned to the senders.
<b>MsgHBFrameHexStr</b>	varchar(2048)	Order: Hexadecimal files - <b>not supported</b>
<b>MsgOtherMedium</b>	nvar- char(4000)	Order: Other data form
<b>AckDateTime</b>	datetime	Receipts and transactions: receipted / receipt not confirmed date / time
<b>AckState</b>	int	Receipt: Status of receipt (receipt flag) (positive / negative) see below
<b>AckText</b>	varchar(50)	Receipt: Receipt text in a readable form (e.g. "not available, not logged in" and others.)
<b>SendCounter</b>	bigint	Send: Internal counter, how often sending was tried
<b>SendDatetime</b>	datetime	Send: Internal flag for last sending ( <i>SendDateTime + SendCycus must be between SendStart and SendEnd, or there will be no sending</i> )
<b>SendMaxAttempts</b>	int	Send: default, maximum number of send attempts ( <i>SendCounter &gt;= SendMaxAttempts will not be sent anymore</i> )
<b>SendStart</b>	datetime	Send: Start sending at the earliest from date / time
<b>SendEnd</b>	datetime	Send: Stop sending at the latest to date / time
<b>SendCycusSeconds</b>	int	Send: Repeating cycle of messages which could not be sent, repeat this every xx seconds (e.g. every 120 seconds), but at the latest until [SendEnd] is obtained.
<b>xTAN</b>	bigint	TAN of the sending order to the vehicle (is additionally sent to the vehicle as Type 8001). The TAN is generated automatically.

# DATCOM® soft

## DATCOM Communication System

### Necessary database-fields of the sending table (DcsMessageOut)

- **VehicleGSMnumber** : vehicle identification
- **AckState** : 0 is going to be sent (>0 are receipts, see below)
- **MsgTransferMedium** : 1 send via GPRSgateway
- **MsgHBType** : H-block-type (0-65535)
- **MsgHBFrameStr** : H-block-datastring (ascii-binary)
- **MsgTAN** : transaction identification (for assignment of the receipt)
- **MsgUrgency** : 0 to 65535 (>0 send, 0 no sending)
- **UserName** : name of sender / user / dispatcher / WebSvc-user
  
- **SendCounter** : number of sending actions to date (set to 0)
- **SendMaxAttempts** : maximum number of sending attempts (set >0)
  
- **SendStart** : date and time of sending start
- **SendEnd** : date and time of sending end
- **SendCyclusSeconds** : interval in seconds between sending actions

### Example 1:

Database field	Content
VehicleGSMnumber	499999999999
MsgTransferMedium	1
MsgHBType	10000
MsgHBFrameStr	Please report back immediately.
MsgTAN	1234567890
MsgUrgency	10000
AckState	0
SendCounter	0
SendMaxAttempts	5
SendStart	12.03.2009 08:00:00
SendEnd	12.03.2009 09:00:00
SendCyclusSeconds	300
Username	K. Müller

- The user "K. Müller" wants to send the text "Please report back immediately." with Type "10000" (text) to the vehicle with the ID "499999999999" via GPRS (1).
- Here the sending order gets the transaction ID "1234567890".
- The urgency is between average and important (10000), the sending counter and the receipt flag are going to be reset (0).
- If not reaching the vehicle the order shall be repeated 5 times at the most, with a repeating cyclus of 5 minutes (300 seconds).
- The transmission shall be started from 12.03.2009 08:00:00, in case of no success it shall be stopped on 12.03.2009 09:00:00, unless the maximum number of sending attempts (5) was already exceeded.

# DATCOM® soft

## DATCOM Communication System

---

### Example 2:

Database field	Content
VehicleGSMnumber	499999999999
MsgTransferMedium	1
MsghBType	0
MsghBFrameStr	18
MsgTAN	6554
MsgUrgency	65535
AckState	0
SendCounter	0
SendMaxAttempts	100
SendStart	12.03.2009 08:00:00
SendEnd	13.03.2009 08:00:00
SendCyclusSeconds	1200
UserName	MasterWeb

- The "MasterWeb" interface wants to send the control sequence "18" decimal (0x12 hex, 0001 0010 binary) with type "0" (2-Byte) to the vehicle with the ID "499999999999" via GPRS (1).
- Here the sending order gets the transaction ID "6554".
- The urgency is absolutely urgent (65535), the sending counter and the receipt flag are going to be reset (0).
- If not reaching the vehicle the order shall be repeated 100 times at the most, with a repeating cyclus of 20 minutes (1200 seconds).
- The transmission shall be started from 12.03.2009 08:00:00, in case of no success it shall be stopped on 12.03.2009 08:00:00 (after 24 hours), unless the maximum number of sending attempts (100) was already exceeded.

# DATCOM® soft

## DATCOM Communication System

---

### Example 3:

Database field	Content
VehicleGSMnumber	2411587
MsgTransferMedium	1
MsgHBType	6312
MsgHBFrameStr	-166985
MsgTAN	AS/MM.133548
MsgUrgency	3
AckState	0
SendCounter	0
SendMaxAttempts	2
SendStart	12.07.2009 19:00:00
SendEnd	12.07.2009 19:10:00
SendCyclusSeconds	60
UserName	4493382

- The user with the ID "4493382" wants to send the control sequence "-166985" decimal (0xFFFFD73B7 hex) with type "6312" (4-Byte) to the vehicle with the ID "2411587" via GPRS (1).
- Here the sending order gets the transaction ID "AS/MM.133548".
- The urgency is very low (3), the sending counter and the receipt flag are going to be reset (0).
- If not reaching the vehicle the order shall be repeated twice at the most, with a repeating cyclus of 1 minute (60 seconds).
- The transmission shall be started from 12.07.2009 19:00:00, in case of no success it shall be stopped on 12.07.2009 19:10:00 (after 10 minutes), unless the maximum number of sending attempts (2) was already exceeded.

# DATCOM® soft

## DATCOM Communication System

### AckState (Sending receipt)

Value	Meaning
0	New entry (new entry without further processing), 0 is sent, > 0 are receipts from the DCS module or from SendServer (GPRSgateway or similar)
1	In progress – is prepared for sending, is sent to LANserver of GPRSgateway
...	
10	No socket to gateway (DCS client is not logged into the LANserver of GPRSgateway)
...	
101	Vehicle is not logged in GPRSserver of GPRSgateway
102	No Vehicle-ID received to send to
103	No Message received to send
104	Vehicle not connected to GPRSserver of GPRSgateway
105	No answer from vehicle (but maybe the message could have been transmitted before), no ack
106	Timeout in async.-mode (time for asynchronous sending is up, vehicle has not logged in again so far)
...	
201	Not supported vehicle-unit (vehicle will not understand this message, e.g. SafeMate, Mambo2 etc.)
202	Message type not supported
203	Communication channel not supported
204	Error while sending
205	Unknown situation
206	Vehicle is switched off (MsgType 1003)

### MsgTransferMedium (Sending transmision path)

Value	Meaning
1	Vehicle is available via GPRSgateway (H-compatible TCP/IP)
...	
100	Webservice (vehicle is available via Webservice)

### MsgUrgency (Sending urgency)

Value	Meaning
0	Do not send – without any priority
1	Unimportant – lowest priority
...	
65535	Very important – highest priority

# DATCOM® soft

### Examples of SQL queries

#### 1. Send to vehicles

##### 1.1. Display all sending orders

```
SELECT VehicleGSMnumber, UserName, MsgTime, SendDatetime, MsgTAN, MsgUrgency, MsgHbType, MsgHBFrameStr, AckDateTime, AckState, AckText,
       SendCounter, SendMaxAttempts, SendStart, SendEnd, SendCycusSeconds, MsgTransferMedium
FROM   DcsMessageOut
ORDER BY MsgTime DESC, UserName, VehicleGSMnumber, MsgUrgency DESC
```

##### 1.2. Display sending orders by vehicle and user

```
SELECT DcsVehicle.VehicleName AS Fahrzeug, DcsMessageOut.MsgTime AS Erhalten, DcsMessageOut.SendDatetime AS Gesendet,
       DcsMessageOut.MsgHBFrameStr AS Text, DcsMessageOut.AckDateTime AS Quitiert, DcsMessageOut.AckText AS Quittung
FROM   DcsMessageOut INNER JOIN
       DcsVehicle ON DcsMessageOut.VehicleGSMnumber = DcsVehicle.VehicleGSMnumber
WHERE  (DcsMessageOut.UserName = 'fenske') AND (DcsMessageOut.VehicleGSMnumber = 'N499999999999')
ORDER BY Erhalten DESC, DcsMessageOut.UserName, DcsMessageOut.VehicleGSMnumber, DcsMessageOut.MsgUrgency DESC
```

##### 1.3. Last 30 sending orders relating to "transport" and vehicle

```
SELECT TOP (30) DcsVehicle.VehicleName, DcsMessageIn.VehicleGSMnumber, DcsMessageIn.MsgDate, DcsMessageIn_1.MsgHbFrameHex AS Hex2,
       DcsMessageIn.MsgHbFrameStr AS Text1, DcsMessageIn_1.MsgHbType AS Type2
FROM   DcsMessageIn INNER JOIN
       DcsVehicle ON DcsMessageIn.VehicleGSMnumber = DcsVehicle.VehicleGSMnumber INNER JOIN
       DcsMessageIn AS DcsMessageIn_1 ON DcsMessageIn.HbFrameld = DcsMessageIn_1.HbFrameld
WHERE  (DcsMessageIn.VehicleGSMnumber = 'N4911116660023') AND (DcsMessageIn.MsgHbType = 11010) AND (DcsMessageIn_1.MsgHbType > 0) AND
       (DcsMessageIn_1.MsgHbType <> 61441) AND (DcsMessageIn_1.MsgHbType <> 57344) AND (DcsMessageIn_1.MsgHbType <> 11010) OR
       (DcsMessageIn.VehicleGSMnumber = 'N4911116660023') AND (DcsMessageIn.MsgHbType = 10000 OR
       DcsMessageIn.MsgHbType >= 10301 AND DcsMessageIn.MsgHbType <= 10310) AND (DcsMessageIn_1.MsgHbType > 0) AND
       (DcsMessageIn_1.MsgHbType <> 61441) AND (DcsMessageIn_1.MsgHbType <> 57344) AND (DcsMessageIn_1.MsgHbType <> 11010)
ORDER BY DcsMessageIn.MsgDate DESC
```

##### 1.4. Send a text message (type 10000) to vehicle

```
INSERT INTO DcsMessageOut
  (VehicleGSMnumber, MsgTransferMedium, MsgTAN, MsgUrgency, MsgHbType, MsgHBFrameStr, AckState, SendCounter, SendMaxAttempts,
   SendStart, SendEnd, SendCycusSeconds, UserName)
VALUES ('499999999999', 1, '634024388089160299', 5000, 10000, 'Testmessage', 0, 0, 5, '2010-22-2 12:00:00', '2010-22-2 14:00:00', 30, 'fenske')
```

# DATCOM® soft

## DATCOM Communication System

---

### 2. Login / logout drivers and co-drivers

#### 2.1. Current driver login (login type 10050)

```
SELECT TOP (1) ID, MsgDate, DbInDate, MsgHbType, MsgHbFrameStr, LocationDate, LocationLongitude, LocationLatitude, LocationAddressText, LocationSats,
       LocationSpeed, LocationDirection, sDriverId
FROM   DcsMessageIn
WHERE  (MsgHbType = 10050) AND (VehicleGSMnumber = '499999999999')
ORDER BY ID DESC
```

#### 2.2. Current driver logout (logout type 10051)

```
SELECT TOP (1) ID, MsgDate, DbInDate, MsgHbType, MsgHbFrameStr, LocationDate, LocationLongitude, LocationLatitude, LocationAddressText, LocationSats,
       LocationSpeed, LocationDirection, sDriverId
FROM   DcsMessageIn
WHERE  (MsgHbType = 10051) AND (VehicleGSMnumber = '499999999999')
ORDER BY ID DESC
```

#### 2.2.1. Current driver logout with driver data (first name + name)

```
SELECT TOP (1) DcsMessageIn.ID, DcsMessageIn.MsgDate, DcsMessageIn.DbInDate, DcsMessageIn.MsgHbType, DcsMessageIn.MsgHbFrameStr,
       DcsMessageIn.LocationDate, DcsMessageIn.LocationLongitude, DcsMessageIn.LocationLatitude, DcsMessageIn.LocationAddressText,
       DcsMessageIn.LocationSats, DcsMessageIn.LocationSpeed, DcsMessageIn.LocationDirection, DcsMessageIn.sDriverId, DcsDriver.FirstName,
       DcsDriver.LastName
FROM   DcsMessageIn INNER JOIN
       DcsDriver ON DcsMessageIn.sDriverId = DcsDriver.PersonalID
WHERE  (DcsMessageIn.MsgHbType = 10051) AND (DcsMessageIn.VehicleGSMnumber = '499999999999')
ORDER BY DcsMessageIn.ID DESC
```

#### 2.3. Co-drivers are listed as articles carried along ([Typ] = "CoDriver", [Unit] = "Person")

##### 2.3.1 All logged in co-drivers (login type 10052), [CreatedName] is the vehicle ID

```
SELECT DcsArticle.Number AS CoDriverID, DcsTourLoad.CreatedDate AS LoginDate, DcsTourLoad.CreatedName AS inVehicleID,
       DcsTourLoad.FinishedDate AS LogOutDate, DcsTourLoad.FinishedName AS outVehicleID
FROM   DcsTourLoad INNER JOIN
       DcsArticle ON DcsTourLoad.ArticleNumber = DcsArticle.Number
WHERE  (DcsArticle.Type = 'CoDriver') AND (DcsArticle.Unit = 'Person') AND (DcsTourLoad.CreatedName = '499999999999') AND
       (DcsTourLoad.FinishedDate IS NULL)
```

##### 2.3.2 All logged out co-drivers (logout type 10053), [CreatedName] ist he vehicle ID

```
SELECT DcsArticle.Number AS CoDriverID, DcsTourLoad.CreatedDate AS LoginDate, DcsTourLoad.CreatedName AS inVehicleID,
       DcsTourLoad.FinishedDate AS LogOutDate, DcsTourLoad.FinishedName AS outVehicleID
FROM   DcsTourLoad INNER JOIN
       DcsArticle ON DcsTourLoad.ArticleNumber = DcsArticle.Number
WHERE  (DcsArticle.Type = 'CoDriver') AND (DcsArticle.Unit = 'Person') AND (DcsTourLoad.CreatedName = '499999999999') AND
       (NOT (DcsTourLoad.FinishedDate IS NULL))

        (DcsMessageIn._1.MsgHbType = 4210)
ORDER BY Empfang
```

### 4. MessageState (WebService-Funktion)

#### 4.1. Detect transaction number of sent orders (xTAN) from the table [DcsMessageOut]

```
SELECT  xTAN, MsgTime, MsgTransferMedium, MsgTAN, MsgUrgency, MsgHBType, MsgHBFrameStr, MsgHBFrameHexStr, MsgOtherMedium, AckDateTime,
        AckState, AckText, SendCounter, SendDatetime, SendMaxAttempts, SendStart, SendEnd, SendCyclus, SendCyclusSeconds
FROM    DcsMessageOut
WHERE   (VehicleGSMnumber = N'499999999999') AND (xTAN > 0) AND (UserName = 'fenske')
ORDER BY ID DESC
```

#### 4.2. Using the respective xTAN to detect the vehicle receipts belonging to it from the table [DcsMessageIn]

```
SELECT  MsgDate, DbInDate, HbFrameId, HbFrameSize, DbOperator, MsgHbType, MsgHbTypeText, MsgHbFrameHex, MsgHbFrameStr, LocationDate,
        LocationLongitude, LocationLatitude, LocationAddressText, LocationSats, LocationSpeed, LocationDirection, LocationStatus, LocationDop,
        LocationHbFrameHex, CustomerId, sDriverId, sDriverName
FROM    DcsMessageIn
WHERE   (MsgHbType <> 61441) AND (MsgHbType <> 11010) AND (MsgHbType <> 0) AND (MsgHbType <> 57344) AND (xTAN = 6960990) AND
        (MsgDate >= CONVERT(DATETIME, '2009-03-12', 102))
ORDER BY ID DESC
```

### 5. Messages\_get (WebService-Funktion)

#### 5.1. Last 30 days

```
SELECT  ID, MsgDate, DbInDate, MsgHbType, MsgHbFrameHex, MsgHbFrameStr, LocationDate, LocationLongitude, LocationLatitude, LocationAddressText,
        LocationSats, LocationSpeed, LocationDirection, LocationStatus, LocationDop, sDriverId, sDriverName, Reader, ReadingDate, isRead
FROM    DcsMessageIn
WHERE   (MsgHbType = 10000) AND (VehicleGSMnumber = N'499999999999') AND (MsgDate >= CONVERT(DATETIME, '2010-1-22 00:00:00', 102)) AND
        (CustomerId = 1)
ORDER BY ID DESC
```

#### 5.2. All messages for type + vehicle

```
SELECT  ID, MsgDate, DbInDate, MsgHbType, MsgHbFrameHex, MsgHbFrameStr, LocationDate, LocationLongitude, LocationLatitude, LocationAddressText,
        LocationSats, LocationSpeed, LocationDirection, LocationStatus, LocationDop, sDriverId, sDriverName, Reader, ReadingDate, isRead
FROM    DcsMessageIn
WHERE   (MsgHbType = 10000) AND (VehicleGSMnumber = N'499999999999')
ORDER BY ID DESC
```

### 6. VehicleMessage\_get (WebService-Funktion)

#### 6.1. Messages from type 10301 to 10302 (transport) of the last 30 days + VehicleID

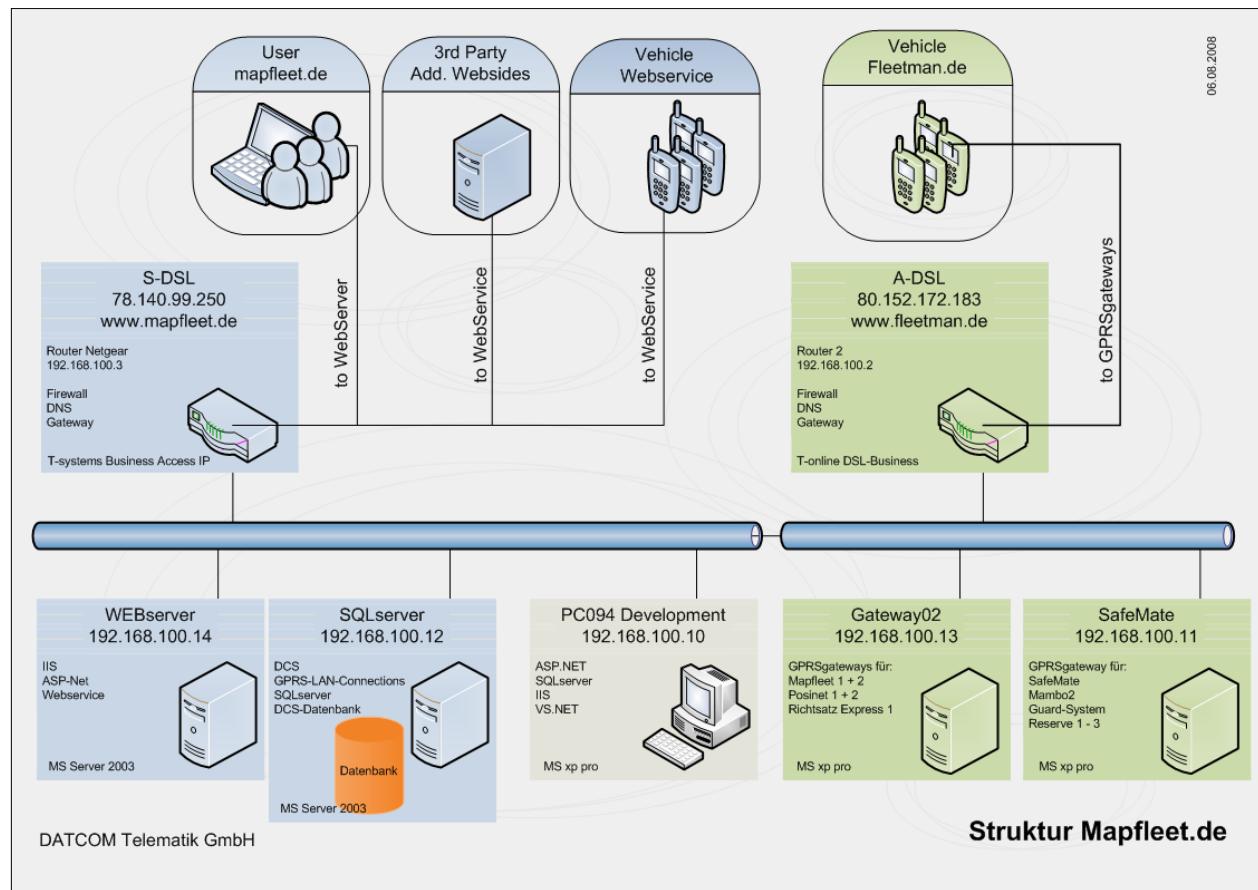

```
SELECT  ID, MsgDate, DbInDate, MsgHbType, MsgHbFrameHex, MsgHbFrameStr, LocationDate, LocationLongitude, LocationLatitude, LocationAddressText,
        LocationSats, LocationSpeed, LocationDirection, LocationStatus, LocationDop, sDriverId, sDriverName, Reader, ReadingDate, isRead
FROM    DcsMessageIn
WHERE   (MsgHbType BETWEEN 10301 AND 10302) AND (VehicleGSMnumber = N'499999999999') AND (MsgDate >= CONVERT(DATETIME,
        '2010-1-22 00:00:00', 102))
ORDER BY ID DESC
```

### Example of deleting old database entires by MS SqlServer

```

/* Löschen der alten Daten aus den DCS Datentabellen

Partielles Löschen der alten Daten

@DaySpan ist das Alter der Daten, ältere Daten werden gelöscht.

SET @DaySpan = 92 /* 3 Monate, ältere Daten werden gelöscht */
SET @DaySpan = 122 /* 4 Monate, ältere Daten werden gelöscht */
SET @DaySpan = 153 /* 5 Monate, ältere Daten werden gelöscht */
SET @DaySpan = 183 /* 6 Monate, ältere Daten werden gelöscht */

Es werden jeweils @MaxRows gelöscht, solange bis alle Daten gelöscht wurden.
Hierdurch wird eine mögliche lange Blockade des Sqiservers vermieden.

Die Blockade, die trotzdem entsteht, sollte nicht länger als 30 Sekunden dauern,
deshalb ist "SET @MaxRows = 3000" ein korrekter Wert.

*/

DECLARE @DaySpan int
DECLARE @MaxRows int
